

KELLER NASCIMENTO

FRONTEND DEVELOPER // JAVASCRIPT + TYPESCRIPT + REACT

Pindamonhangaba, SP, Brazil | +55 12 99175-2919 | keller.nasc@gmail.com | github.com/kellernz1 | [Portfolio](#)

> CORE STACK

- JavaScript (ES6+)
- TypeScript
- React
- HTML5 / CSS3
- Tailwind CSS
- Vite
- Git / GitHub
- REST APIs / WebSockets

> ENGINEERING

- Reusable component design
- Responsive UI development
- Cross-browser compatibility
- Debugging and troubleshooting
- Automated testing with Vitest
- CI/CD with GitHub Actions
- State management with Zustand

> STRENGTHS

- Analytical problem solving
- Clear written communication
- Remote collaboration
- Organization and ownership
- Continuous learning

> EDUCATION

Technology in Systems Analysis and Development

Faculdade Descomplica

In progress - Expected Jul 2028

> LANGUAGES

- Portuguese - Native
- English - Intermediate

PROFILE

Frontend-focused Systems Analysis and Development student with hands-on experience building web applications using JavaScript, TypeScript, and React. I create responsive interfaces, reusable components, API integrations, real-time features, and automated tests. My projects demonstrate practical skills in debugging, performance-minded development, CI/CD, and translating product ideas into functional user experiences.

SELECTED PROJECTS

ctOS Portfolio // [view repository](#)

A hacker-inspired portfolio operating system featuring a boot sequence, real command terminal, draggable windows, animated skill scanner, project filtering, accessibility considerations, and automated deployment to GitHub Pages.

STACK: React, TypeScript, Vite, Zustand, Vitest, CSS, GitHub Actions

CamForge // [view repository](#)

Responsive browser application for real-time webcam processing, AI-powered segmentation, Canvas rendering, and WebSocket communication, designed with performance and OBS integration in mind.

STACK: React, JavaScript, Vite, Tailwind CSS, MediaPipe, Canvas, WebSocket

LoL Randomizer // [view repository](#)

Component-based web application with validation rules and Riot Data Dragon API integration. Includes automated tests and a continuous integration pipeline.

STACK: React, TypeScript, Vite, Vitest, GitHub Actions, REST API

Dungeon Quest // [view repository](#)

Browser RPG with a React interface, Canvas-based combat, procedural generation, inventory, and progression systems. The architecture separates UI components, state, and game logic.

STACK: React, TypeScript, Vite, HTML5 Canvas, WebSocket, Vitest

ChatBridge // [view repository](#)

Real-time dashboard that centralizes chat messages from multiple platforms in a responsive React interface, with state management and an OBS-friendly overlay.

STACK: React, JavaScript, Vite, Tailwind CSS, Zustand, Node.js, Socket.io

DEVELOPMENT APPROACH

- Build clean, reusable components and responsive layouts.
- Integrate APIs and real-time communication while handling errors clearly.
- Use version control, automated tests, and CI workflows to improve reliability.
- Debug systematically and refine interfaces based on usability and performance.
